Summary

Backend-focused full-stack engineer who architects PostgreSQL databases and REST APIs from scratch and ships multi-tenant SaaS to production. At GixiAI I build Orenyx, a US AI lead-handling platform, delivering its live influencer marketplace, NIL deals platform and engine security module on Node.js (NestJS, Express), TypeScript, Next.js and PostgreSQL with row-level security. Strong in Stripe payments, queue-driven automation and AI integrations, including a personal real-time voice agent that replies within 300 ms.

Experience

Full-Stack Engineer, GixiAI | 08/2026 to Present | Hybrid, Islamabad

Client: **Orenyx**, a US multi-product SaaS company whose AI lead-handling engine (Orenyx Engine) powers several vertical products. Two-developer team; I owned whole products from scope to production deployment and client delivery reports.

- Architected the PostgreSQL databases for all three Orenyx products from scratch, enforcing multi-tenant isolation with row-level security on every table and Prisma migrations, and built their REST APIs in Node.js (NestJS and Express).
- **Orenyx Influencer Connect** (live): built the two-sided marketplace matching local businesses with creators, including a city launch lifecycle (Off, Warming Up, Ready, Live, At Risk) driven by live readiness counts, admin-editable thresholds and owner approval to go live.
- Engineered a scheduled, per-city Instagram creator discovery bot (Playwright, proxy management, evidence-based profiling) on Redis and BullMQ, with live progress and stall detection in the admin panel.

- Built deal flow with in-app chat, city-gated free trials and billing, server-checked paid ad slots, and an Instagram integration with deauthorization webhooks.
- **Orenyx NIL Engine** (live): delivered a deals platform for college athletes, agents and brands end to end, with role-based sign-up, identity verification intake, deal workflow, compliance audit trail, reporting and admin console.
- Designed a retry outbox for server-to-server calls to Orenyx Engine, so no sign-up or contact message is lost when the engine is down.
- Implemented Stripe billing across three products: subscriptions with signed webhooks, Stripe Connect onboarding and direct job payments, and a credits ledger with contractor payouts, verified with test clocks.
- **Orenyx Engine** (live): built the security and compliance module (live row-level security status from the PostgreSQL catalogue, strict sandbox for test keys, per-tenant key rotation, streamed audit exports) and rate-limited public endpoints that feed website engagement into Claude-based lead scoring.
- Co-built a field service platform for trades businesses with AI scheduling bots (Google Calendar) and ElevenLabs voice-call-to-job handoff; wrote milestone scopes and delivery reports backed by unit and end-to-end tests against a real database and Stripe test mode.

Stack: TypeScript, Node.js, NestJS, Express, REST APIs, Next.js 16, Prisma, PostgreSQL (RLS), Redis, BullMQ, Stripe, Twilio, ElevenLabs, Claude API, Playwright, Vitest, Turborepo, PM2, Nginx, Hetzner Linux

Internal projects:

- Designed and built the company website, gixiai.com, solo in Next.js: original design and scroll-driven animations, fully responsive layouts, and technical SEO (meta tags, Open Graph and Twitter cards, canonical URLs, indexing rules) across service, portfolio, blog, FAQ and contact pages.

Software Developer Intern, FIDSOR Private Limited | 07/2026 to 09/2026 | Islamabad

Took two SaaS products from concept to working MVP.

- Built a WhatsApp-style messaging platform on the official WhatsApp Business API, with a Supabase and PostgreSQL database I designed: multi-account management, virtual groups, AI and rule-based auto-replies, and bulk campaign messaging.

- Built an AI chatbot for customer support and sales replies, with intent detection to answer FAQs, using Gemini models through OpenRouter.
- Built a social media manager for Facebook, Instagram and TikTok that publishes text, image and video posts to all three platforms in one click.
- Added AI-generated and AI-assisted post creation for text, images and video using the OpenAI API.
- Worked in a Next.js and React team with code reviews, API integrations, testing and bug fixing.

Stack: Next.js, React, Supabase, PostgreSQL, Meta Graph API, WhatsApp Business API, TikTok API, OpenRouter (Gemini), OpenAI API

Freelance Full-Stack Developer, Upwork and Freelancer | 2024 to Present

- Tazmim (AI interior design SaaS): designed the Supabase PostgreSQL schema and built a Next.js app with Google OAuth and JWT auth, Stripe subscriptions, AI design generation workflows, and Linux server deployment.
- Memecoin launcher: built AI content generation and scheduled auto-posting to X with the OpenAI and X APIs, using Redis caching to cut API load.

Stack: Next.js, React, Node.js, Supabase, Stripe, OpenAI API, X API, Redis

Full-Stack Developer Intern, Zendev Studios | 07/2025 to 08/2025

- Built ZenBug, a Chrome extension feedback tool with screenshot capture, annotation and upload, plus an admin dashboard and bug-tracking APIs.

Stack: React, Node.js, Supabase, MongoDB, Chrome Extensions API, Tailwind CSS

Selected Projects

AI Voice Calling Agent for US Trucking (personal SaaS, in production) | 06/2026 to 08/2026

- Built a voice agent that phones truck drivers across the US to connect them with available work, handling each call end to end.
- Engineered a streaming speech-to-text, LLM and text-to-speech pipeline that starts replying within 300 ms of the driver finishing speaking, close to human conversational turn-taking.

Integrated Animal Welfare and Rescue System (Final Year Project) | 01/2026 to Present

- Built a React Native (Expo) app for animal rescue, adoption, vet appointments and donations, with JWT, Google OAuth and role-based access.
- Trained and fine-tuned YOLO, Keras and YAMNet models for breed, disease and emotion detection from images and audio, served through a Flask inference service.
- Added OCR-based medical record digitization and geo-tagged rescue reporting with case tracking.

Spring MVC App on AWS (Cloud and DevOps)

- Deployed a Spring MVC app on EC2 and RDS inside a custom VPC with public and private subnets, security groups and route tables.
- Configured an Apache reverse proxy, DNS, and SSL/TLS with Certbot, then scanned the deployment with Acunetix.

Skills

- **Languages:** TypeScript, JavaScript (ES6+), Python, Java, SQL
- **Frontend:** Next.js (App Router, server actions), React, React Native (Expo), Tailwind CSS, Zustand
- **Backend:** Node.js, Express, NestJS, REST API design, client-server architecture, Prisma, Flask, Spring MVC
- **Data:** PostgreSQL (schema design from scratch, row-level security, multi-tenancy, migrations), Redis, BullMQ, MongoDB, MySQL, Supabase
- **Payments and integrations:** Stripe (subscriptions, Connect, webhooks, test clocks), Twilio, Meta Graph and WhatsApp Business APIs, TikTok API, Instagram API, Google Calendar API, X API, Google OAuth, JWT
- **AI:** Claude API, OpenAI API, Gemini (OpenRouter), ElevenLabs, real-time voice pipelines (STT, LLM, TTS), YOLO, TensorFlow/Keras, YAMNet, transfer learning
- **Testing and automation:** Playwright, Vitest, end-to-end testing
- **DevOps:** Linux (Hetzner, Ubuntu), Nginx, Apache, PM2, Docker, AWS (EC2, RDS, VPC), SSL/TLS, Vercel, pnpm, Turborepo, Git

Education

BS Computer Science, SZABIST University Islamabad | CGPA 3.6/4.0

Coursework: Data Structures and Algorithms, Database Systems, Object Oriented Programming, Computer Networks, Operating Systems, Parallel and Distributed Computing, Artificial Intelligence

O and A Levels, The City School

Certifications

- National AI Training Bootcamp: Datacenter Infrastructure and Solutions, Indus AI Week, PSEB
- Artificial Intelligence and Data Science Technical Training, SZABIST Islamabad
- JavaScript; Python for Programmers, Codecademy
